QR (Quick Response) code....

QR codes are similar to barcodes used by retailers to track inventory and price reductions at the point of sale. QR codes are slightly different as they are two-dimensional matrix barcodes that can hold thousands of alphanumeric characters of information.

QR codes can be used to link to digital content on the web, activate a number of phone functions including email, IM and SMS: and connect the mobile device to a web browser.

Download a QR reader for your mobile device and then scan our QR code below which is designed to take you direct to our mobile website where you can search for properties for sale or rent.

S&W Mobile Website
